### EDUCATION

**Coding Dojo** - Fullstack Software Development

March 2022 - February 2023

Immersive Full-stack Training Program in Python, HTML5, CSS, Javascript, React, MySQL, Flask, and Django

### TECHNICAL PROJECTS

**Workout Application** | <http://mattb-react-gymapp.netlify.app>

- Used React library to navigate between different components on the page, using the different aspects of JavaScript to implement a user friendly experience
- Used RapidAPI to fetch information on workouts and what muscle group they target, also using it to call back into the api to show similar exercises
- Constructed CSS styling to provide different looks for different devices using relative min and max styling along with React Material MUI
- Deployed with Netlify, used GitHub to set files up to be pushed to deployment, while having continuous updates

**Expense Page** | [https://github.com/MattBourgeois/Budget\\_project](https://github.com/MattBourgeois/Budget_project)

- Developed responsive webpage using HTML, CSS, and Bootstrap for an ideal user experience
- Used PyMySQL to connected to MySQL and retrieve the data to loop through and gather the data to
- Utilized ChartJS to pull the data from MySQL and Logic to form a graph representing requested financial data
